

VEREX

Fabric Softener Concentrate—Residual Bacteriostat

VEREX is a duo-action liquid quaternary fabric softener. It not only softens fabric, but is a residual bacteriostat and residual self-sanitizer for prevention of odors under conditions of high relative humidity or wet contamination.

Designed to be used in commercial and institutional laundry operations by addition to the final rinse cycle. The residual self-sanitizing activity reduces the number of odor-causing bacteria.

- When used as recommended, **VEREX** provides self-sanitizing activity against odor-causing Gram Positive and Gram Negative organisms (under conditions of high relative humidity or wet contamination).
- At higher use concentration, **VEREX** provides residual bacteriostat activity against odor causing Gram Positive organisms (under conditions of relative humidity or wet contamination).
- **VEREX** inhibits the growth of organisms which act on urine to produce ammonia in diapers and wet bed linen.
- Provides softening of clothes, eliminating chafing and "static cling" from nylons and other synthetic fabric.
- **VEREX** also helps to improve ironing time through lubrication of fibers.
- **VEREX** is an EPA registered formula.
